

Notes 8

cat

- Used to display the content of a file.

Formula: `cat + option + file(s)` to display

Example: `cat + ~/Documents/sample_files/file.txt`

tac

- Used to display the content of a file in reverse order.

Formula: `tac + option + file(s)` to display

Example: `tac + ~/Documents/sample_files/file.txt`

head

- Displays the first N number of lines in a given file. Prints the first 10 by default.

Formula: `head + option + files(s)` to display

Example: `head + ~/Documents/sample_files/file.txt`

tail

- Displays the last N number of lines in a given file. Prints the last 10 by default.

Formula: `tail + option + file(s)` to display

Example: `tail + ~/Documents/sample_files/file.txt`

cut

- Used to remove a specific section of each line in a file and display it.

Formula: `cut + option + file(s)` to display

Example: `cut + -d ':' -f1 /etc/passwd/`

sort

- Used to sort files. Can sort alphabetically, in reverse, by number and by date.

Formula: `sort + option + file(s)` to display

Example: `sort + file.txt`

WC

- Used to print the number of lines characters and bytes in a file.

Formula: `wc + option + file(s)` to display

Example: `wc + l + file.txt`
