

Notes 2

1. What is an Operating System?

An operating system provides all fundamental software features of a computer.

2. What is a kernel?

A kernel is a software component that's responsible for managing low-level features of the computer. Including managing system hardware, memory allocation, CPU time, and program to program interaction.

3. Which other parts aside from the kernel identify an OS?

Command-Line Shells, Graphical user Interfaces, Utility and Productivity Programs, and Libraries

4. What is linux and linux distribution?

Linux is a Unix-like OS popular in academic and business environments. Linux distribution is an operating system built around the linux kernel.

5. List at least 4 linux characteristics:

Linux is open source, free of charge, highly customizable and runs on almost any system.

6. What is Debian?

Debian is an all-volunteer organization dedicated to developing free software and promoting the ideals of the free software community.

7. List and define the different types of licensing agreements

- Open Source: the software may be distributed for a fee or free. The source code is distributed with the software.
- Closed Source: the software is not distributed with the source code. The user is restricted from modifying the code.
- Freeware: the software is free but the source code is not available
- Shareware: the software is free on a trial basis

8. What is Free Software? Define the 4 freedoms.

Free Software is software distributed with the source code.

- Freedom 0: use the software for any purpose
- Freedom 1: examine the source code and modify as you see fit
- Freedom 2: redistribute the software
- Freedom 3: redistribute your modified software

9. What is virtualization?

Virtualization is defined as creating virtual versions of something.
