

Notes 4

How to install and remove software using the APT command.

- To install and remove software using the APT command, you use the formula `sudo + apt + package name`.

How to create a shell script step by step including screenshots and how to run it. Try to be as detailed as possible.

- To create a shell script, the first step is to create a folder where you can put all your scripts. After that, you open the text editor and create a file with the `.sh` file extension. In this file your first line will be the shell interpreter path `#!/bin/bash`. All code after this will run in the terminal after using `cd` to find the scripts folder, and `bash` to run it.

```
Tilix: thecoon@thecoon: ~/scripts
1: thecoon@thecoon: ~/scripts
thecoon@thecoon:~$ cd scripts/
thecoon@thecoon:~/scripts$ bash lab4-script2.sh
Hello World
thecoon@thecoon:~/scripts$ bash lab4-script2.sh
Hello World
t\This line starts with a tab
This is line one
This is line two
thecoon@thecoon:~/scripts$
```
